

WEBKMT

BUSINESS PROFILE 2026

Ready-to-run digital systems for growing Middle East businesses

Websites · WhatsApp AI · E-commerce · ERP · Automation

BASED IN Türkiye

Serving Saudi Arabia, the Gulf and the wider Middle East

info@webkmt.com · WhatsApp +90 501 361 7795 · November 2026

AT A GLANCE

One partner for your customer-facing and operating systems

WEBKMT helps small and medium-sized businesses replace disconnected tools and manual follow-up with installed, configured and managed digital systems — without starting every project from a blank page.

Who we serve

Small and medium-sized businesses, with our main market in Saudi Arabia and clients served across the Gulf and wider Middle East.

Where we work

An online-first agency based in Türkiye, working in English and Saudi/Gulf-friendly Arabic, with calls on WhatsApp or Google Meet.

What we build

Business websites, WhatsApp and website AI, e-commerce, ERP, workflow automation and selected custom web systems.

How we work

We package proven open-source platforms and ready-made designs into systems configured for your business, then help you run them.

Inside this profile

Section	What you will find
Our approach	Who WEBKMT is, the problem we solve, and how an engagement works.
Product ecosystem	The five WEBKMT systems and how they fit together.
Product pages	What each system does, who it suits, what is included, and what remains scoped.
Commercial snapshot	Approved starting prices, payment model, and items confirmed in the official quote.
Why WEBKMT	Ownership, Arabic-first delivery, transparent entry points, and human accountability.

A practical starting point

Most clients do not need everything at once. Start with the bottleneck that is costing enquiries, sales or staff time — then connect the next system when the first one is working.

WHO WE ARE

Digital systems, installed for the way your business actually runs

WEBKMT is an online digital systems agency for companies and SMBs. We turn mature, ready-made technology into business systems your team can use from day one.

Many growing businesses already have some combination of a website, WhatsApp, spreadsheets, accounting files, social accounts and staff knowledge that lives only in people's heads. The problem is rarely a lack of software. It is that the pieces do not work together, enquiries wait too long for a reply, and every routine task depends on someone remembering to do it.

WEBKMT closes those gaps. We design the customer journey, install the system, configure it around your services and data, and stay involved after launch through hosting, maintenance and support options.

Ready to run

Templates, proven open-source platforms and repeatable implementation patterns reduce build time and avoid unnecessary custom software.

Configured, not generic

Your branding, services, products, prices, policies, users and workflows are set up for your business — not left as demo content.

Arabic and English

Customer-facing systems are designed for Saudi/Gulf audiences as well as English-speaking customers and partners.

Human accountability

Automation handles speed and repetition. People remain responsible for exceptions, judgement calls, quotes and sensitive matters.

Our positioning

Get customers → respond instantly → sell → run the business → automate and grow

WEBKMT Websites creates the front door. WEBKMT Chat captures and answers demand. WEBKMT Store sells online. WEBKMT ERP runs operations. WEBKMT Automate connects the steps in between, and WEBKMT Marketing is being developed to complete the growth loop.

- Published entry prices for the core offers, instead of making every first step a custom quotation.
- Open-source foundations and client ownership of business data and purchased templates.
- A direct, senior-led delivery model: the people scoping your system stay close to implementation and support.

Discover	Respond	Sell	Operate	Grow
Website	Chat	Store	ERP + Automate	Marketing (roadmap)

THE PROBLEM WE SOLVE

Growth breaks when every step is manual

A business can lose revenue long before it has a ‘big technology problem’. Usually the leaks are small, repeated and invisible.

Slow first response

A prospect messages after hours, waits, and quietly chooses a competitor who replied first.

Scattered information

Prices, product details and policies sit across chats, files and staff memory, so answers vary by person.

Leads without a system

Enquiries arrive by form, WhatsApp and social media but are not consistently qualified, recorded or followed up.

Operations in spreadsheets

Stock, invoices, orders and customer records are copied between tools until reporting becomes slow and unreliable.

The WEBKMT response

Business moment	Connected system	Result you can manage
A visitor finds you	WEBKMT Websites / Store	Clear offer, trust signals and a direct path to enquire or buy.
A customer asks a question	WEBKMT Chat	Instant acknowledgement and answers grounded in your approved information.
A lead is ready to talk	Qualification + CRM handoff	Contact details, need and context captured with consent for your team.
An order or invoice moves	WEBKMT ERP / Store	One operational record for customers, stock, sales and finance.
A routine step repeats	WEBKMT Automate	Reminders, notifications, summaries and data movement without manual chasing.

Our design rule

Automate the predictable. Escalate the ambiguous. Never make the customer wait just to learn that their message was received.

PRODUCT ECOSYSTEM

Five systems, one operating picture

Each WEBKMT product can start on its own. Together they form a practical digital operating system for an SMB.

System	Purpose	Engagement	Commercial entry
WEBKMT Websites	Get found and turn visitors into enquiries	Available now	USD 150
WEBKMT Chat	Respond instantly on WhatsApp and your website	Pilot deployments	USD 300 setup + USD 29/month
WEBKMT Store	Sell online with a complete e-commerce system	Scoped implementation	USD 899
WEBKMT ERP	Run finance, stock, sales and operations in one place	Scoped implementation	USD 1,400 setup + care
WEBKMT Automate	Connect tools and remove repetitive manual work	Scoped projects	Quoted after discovery
WEBKMT Marketing	Campaigns, content and customer growth system	In development — partner enquiries open	Quoted after discovery

How to choose your first system

Start with Websites if…

Your current site is missing, outdated, slow to explain your offer, or not turning visits into enquiries.

Start with Chat if…

Customers already message you, but replies are delayed and the same questions consume staff time.

Start with Store if…

You need a serious online catalogue and checkout rather than handling every order through chat.

Start with ERP if…

Finance, inventory, sales and team operations have outgrown spreadsheets and disconnected apps.

Status is stated deliberately. “Scoped implementation” means we confirm modules, data, integrations and responsibilities before issuing the official quote. “Pilot deployments” means the client works closely with WEBKMT while the package is being hardened. WEBKMT Marketing is in development; early partner enquiries are welcome, but it is not presented as a finished off-the-shelf product in this profile.

WEBKMT WEBSITES

A credible front door — from template files to a fully managed year

Choose a ready-made business design, then decide how much of the work WEBKMT should handle for you.

PLAN 1 · FILES ONLY	PLAN 2 · CUSTOMIZED FILES	PLAN 3 · ULTIMATE
USD 150	**USD 300–799**	**USD 800–1,599**
Template code files delivered within a maximum of two days after payment. Yours to use, modify or resell after full payment.	We adapt the design and structure to your business and deliver customized files ready for your deployment.	Customization, initial content writing, hosting, annual maintenance and minor edits during the year.

What a WEBKMT website is designed to do

- Explain your offer quickly and guide visitors to call, message, request a quote or buy.
- Present services, products, proof, FAQs and contact routes in a clean Arabic/English-ready structure.
- Work properly on mobile, where most customer discovery and WhatsApp enquiries begin.
- Provide a foundation that can later connect to WEBKMT Chat, Store, ERP and automation.

Step	What happens	Typical timing
Choose	Browse live template demos and select the closest design and plan.	Same day
Confirm	For Plans 2–3, we scope pages, branding, content, domain and features.	Short discovery call
Deliver	Files only, customized files, or a hosted Ultimate website depending on plan.	Plan 1: max. 2 days after payment; other plans confirmed in quote
Improve	Add pages, chat, store, automations or maintenance as the business grows.	By agreement

Ownership

After full payment, the purchased template is yours — including the right to modify it or resell it. Third-party components remain under their own licences.

WEBKMT CHAT

Never miss or delay a customer inquiry

An Arabic/English AI receptionist for WhatsApp and your website that answers from approved business information, qualifies enquiries and brings a human in when needed.

For Service

Instant acknowledgement, grounded answers to routine questions, and escalation when the answer is missing, sensitive or outside policy.

For Sales

Guided discovery, need and budget qualification, consented contact capture, and a structured lead handoff to your team.

Built from your material

Your services, price lists, FAQs and policies are loaded into an approved knowledge base. The assistant should say it needs to check rather than invent an answer.

Human by design

Customers can ask for a person. Pricing exceptions, complaints, regulated questions and complex requests stay with humans.

How an enquiry flows

Stage	System behaviour
1 · Receive	The customer writes on WhatsApp or the website. The system acknowledges immediately, day or night.
2 · Understand	The message is classified by intent and urgency; Arabic and English are the primary launch languages.
3 · Answer	Approved knowledge is retrieved and used to answer in plain language, with only approved prices and policies.
4 · Qualify	Useful details — need, timing, location, budget band and contact — are collected naturally and with consent.
5 · Hand off	Your team receives the lead context, or the conversation is escalated when a human should take over.

SETUP
USD 300
One business, one WhatsApp entry point and website entry point, one knowledge base.

STANDARD PLAN
USD 29/mo
Fair use: up to 5,000 classified inbound messages and 3,000 AI-generated answers monthly.

KNOWLEDGE UPDATES
4 batches/mo
Initial loading of up to 20 source documents or 100,000 words is included in setup.

WEBKMT Chat is currently offered through closely managed pilot deployments. Appointment requests are captured for human confirmation until booking integration is enabled for the deployment. Meta or provider charges for business-initiated template/campaign messages are not included in the USD 29 plan and are confirmed separately.

WEBKMT STORE

A complete e-commerce system you control

For businesses ready to move beyond taking every order manually through chat, WEBKMT Store provides a full online selling foundation that can grow with the catalogue and market.

Storefront and catalogue

Product categories, search, product pages, promotions and a mobile-first shopping experience in Arabic/English-ready RTL/LTR layouts.

Orders and customers

Checkout, customer accounts, order management, fulfilment statuses and operational views for the store team.

Multi-market readiness

Multi-currency/channel and inventory structures can be configured for the markets and sales model agreed in scope.

Extensible platform

Built on the open-source Bagisto platform and prepared as a repeatable WEBKMT deployment that can be tailored per client.

Basic plan

WEBKMT STORE BASIC

USD 899

Initial setup plus one year of hosting only. This gives you the platform foundation without bundling unpriced management work.

SEPARATELY SCOPED

Official quote

Catalogue/content loading, design customization, payment/shipping integrations, add-ons and ongoing management are itemized before work begins.

Saudi and regional selling — handled honestly

- Payment gateways, shipping providers, tax and invoicing requirements are confirmed against the merchant’s country, registrations and chosen providers during scoping.
- For Saudi Arabia, e-invoicing/ZATCA work is treated as a dedicated localization and integration scope. The merchant’s commercial registration, VAT and platform onboarding remain under the merchant’s control.
- We do not label a store ‘compliant’ until the exact legal, payment and invoicing path has been validated for that merchant.

Best fit

Retailers, wholesalers and product-led SMBs that need a real catalogue, checkout and order operation — and want to own the store platform rather than build the business entirely inside a marketplace or chat thread.

WEBKMT ERP

Finance, stock, sales and operations in one system

An ERPNext-based implementation service that gives growing companies an integrated operating core without per-user software pricing from WEBKMT.

Financial core
Accounting, invoicing, receivables/payables, payments, assets, cost centres and reporting.

Inventory and supply chain
Items, warehouses, purchasing, stock movements, batch/serial/expiry and delivery.

Commercial operations
CRM, quotations, sales orders, customers, support and POS by scope.

People and projects
Employees, attendance, leave, payroll setup, projects, tasks and approvals.

Manufacturing options
BOMs, work orders, planning and quality for makers and assemblers.

Arabic/English working
Bilingual RTL interface, roles, dashboards and reports by team.

Commercial model

Item	WEBKMT model
Implementation setup	**USD 1,400 flat** for the agreed standard implementation scope. Larger migrations, custom development and integrations are quoted explicitly.
User pricing	No WEBKMT per-user ERP licence. Care is priced by hosting/support workload — not by counting seats.
Localization	Country tax/e-invoicing and payroll rules are dedicated implementation work, verified with the client's accountant/HR.

Managed care tiers

Tier	Price	Included care
Essential	USD 59/mo	One company, managed hosting/SSL, daily backups retained 7 days, next-business-day support, 1 minor change/month.
Growth	USD 119/mo	Up to 2 companies/branches, 30-day backups, same-business-day priority, up to 4 minor changes or 2 hours/month, monthly health summary.
Scale	USD 229/mo	Multi-company/high-volume, 90-day backups, urgent priority, up to 8 minor changes or 5 hours/month, quarterly review.

Care covers the configuration WEBKMT delivered: updates, monitoring, backup/restore assistance, break-fix support, user/permission administration and the tier's minor-change allowance. New modules, custom development, data entry/bookkeeping, statutory filing, major migrations, hardware and large training programmes are separate scopes.

WEBKMT AUTOMATE & CUSTOM SYSTEMS

Connect the work between your systems

When staff copy data, chase reminders or repeat the same digital steps every day, automation can give that time back — if the process is scoped properly.

Lead and customer workflows

New enquiry alerts, follow-up tasks, review requests, appointment-request routing and customer notifications.

Finance and operations

Payment reminders, invoice/document routing, stock or threshold alerts, approvals and recurring summaries.

Document intake

Forms and documents can be classified or converted into structured tasks, with OCR/document modules scoped inside the system that needs them.

Reporting

Scheduled sales, operations or website summaries assembled from connected systems instead of manual spreadsheet copying.

Flexible project work

Alongside the packaged systems, WEBKMT can scope legitimate work to build, manage, fix or host websites, landing pages, web applications and mobile-app projects, and to introduce AI into an existing business process. A flexible request is assessed for feasibility, timeline and fit before we commit — it is not converted into an automatic promise.

Automation stage	Purpose
Audit	Map the current process, tools, owners, exceptions and data quality.
Design	Choose the smallest reliable workflow; define approvals, retries and human fallback.
Build & test	Connect systems, handle duplicates/failures, and test with realistic cases.
Operate	Monitor errors, refine templates and expand only where the workflow proves valuable.

Pricing

Automation and custom work are quoted after discovery because the cost depends on the tools, data and exceptions involved. Your official quote will separate setup, third-party charges and any ongoing care.

WEBKMT MARKETING · ROADMAP

Completing the growth loop

WEBKMT Marketing is the fifth system in the ecosystem: a full-scale marketing management layer that will connect campaigns and content to the leads and customers already moving through your WEBKMT systems.

Campaign management

Email and customer journeys, segments, forms and landing pages managed from a structured marketing workspace.

Social operations

Planning and scheduling across connected channels, with approvals and a clear publishing calendar.

Lead lifecycle

Connect campaign engagement to enquiry, qualification and follow-up instead of treating marketing and sales as separate lists.

Market visibility

Owned-channel, review, search and competitor-web monitoring where data access is legitimate and available.

Current status

WEBKMT Marketing is in development and is not sold as a finished standard package in this profile. Businesses interested in shaping an early deployment can discuss a partner project; scope, channels, data sources and any third-party costs will be defined in an official quote.

Why it belongs in the ecosystem

- Your website and store already capture demand; marketing should be able to nurture the people who are not ready today.
- Your chat and CRM already hold customer intent; campaigns should respond to real needs rather than sending the same message to everyone.
- Your ERP knows what customers bought; future growth activity can become more relevant without recreating customer data in another tool.

Until the standard product is ready, WEBKMT can scope focused website, content and automation work that supports growth — without labelling it as the finished Marketing suite.

Useful preparation for early partners

Clean the audience data

Bring customer and lead lists, consent status and segments into an agreed structure.

Connect capture points

Make website, store and chat enquiries measurable and attributable before increasing campaign volume.

Prepare the content engine

Define offers, proof, FAQs and reusable Arabic/English content blocks for campaigns.

Agree the growth scoreboard

Choose a small set of enquiry, conversion and repeat-purchase measures the business will review.

HOW WE WORK

A clear path from first call to a running system

No endless discovery for a standard need. No vague build for a complex one. Each project moves through the same accountable stages.

Stage	WEBKMT	Client
1 · Discover	Understand the business, bottleneck, current tools and success criteria.	Name one decision-maker and share the current process honestly.
2 · Scope & quote	Recommend the smallest suitable system; separate included work, exclusions and third-party costs.	Approve scope, price, data/content responsibilities and timeline.
3 · Configure / build	Install, brand, configure users, content, products, workflows and integrations in scope.	Provide logo, texts, data, account access and registrations where needed.
4 · Review & train	Test realistic cases, correct the agreed items and show the team how to work in the system.	Review with the people who will use it and confirm launch readiness.
5 · Launch	Go live, monitor the first use and resolve launch issues under the agreed support route.	Start using the new process consistently.
6 · Care & grow	Maintain, update and improve under the selected program; propose the next bottleneck to solve.	Keep source information current and tell us when policies or offers change.

Communication

Discovery and review calls are held on WhatsApp call or Google Meet. Email and WhatsApp are the standard written routes.

Response

WEBKMT operates online 24/7. Automated systems respond instantly; standard human follow-up is targeted within one business day.

Timelines

Typical ranges are confirmed in the quote after scope and client inputs are known. Waiting time for content, payments or registrations sits outside the build clock.

Change control

Useful new ideas are welcome — and are quoted as changes when they fall outside the agreed scope, so cost and delivery stay visible.

What we need from you

Brand files, business texts, product/service data, relevant account/domain access, business registrations for payment or invoicing work, and one person able to make decisions and review progress.

COMMERCIAL SNAPSHOT

Transparent entry points, exact scope in writing

The prices below are the approved starting points for standard packages. Your signed official quote confirms scope, timeline, included items and any third-party charges.

Offer	Approved entry price	What it means
Website Plan 1	USD 150	Template code files only; max. 2 days after payment.
Website Plan 2	USD 300–799	Files customized for your business.
Website Plan 3 Ultimate	USD 800–1,599	Customization, content writing, hosting, annual maintenance and minor edits.
WEBKMT Chat	USD 300 + USD 29/mo	Pilot setup and standard fair-use plan described in this profile.
WEBKMT Store Basic	USD 899	Initial setup + 1 year hosting only; add-ons/management quoted separately.
WEBKMT ERP	USD 1,400 + care	Flat implementation setup; care Essential 59 / Growth 119 / Scale 229 per month.
Automate / Marketing	Official quote	Priced after discovery by workflow, channels, data and operating scope.

Package ceiling

No WEBKMT service package exceeds USD 10,000. If a need is larger, we phase it into separately approved packages.

Payment schedule

Template files are paid in full before delivery. Scoped services normally start at 50% with the balance at delivery; monthly/annual programmes are paid in advance.

Payment methods

IBAN, Western Union or crypto. Payment details are provided by a human after the official quote is agreed.

Taxes and third-party fees

Applicable taxes, transfer/provider charges, licences and usage fees are itemized in the official quote where relevant; they are not hidden inside a headline package price.

Summary commercial terms in this profile are for orientation. Cancellation/refund treatment, delivery conditions, client-input dependencies and care exclusions are governed by the signed quote or contract for the specific engagement.

How to get an exact price

1 · Send the bottleneck	2 · Short discovery	3 · Official quote
Tell us what is slow, manual or missing.	We confirm scope, inputs, integrations and the smallest useful start.	Included work, exclusions, timeline and terms — in writing.

WHY WEBKMT

Built for owners who need systems, not software homework

We focus on the combination Middle East SMBs ask for most: speed, ownership, Arabic/English delivery and one accountable partner after launch.

Open-source foundations

Proven platforms reduce licence lock-in and let the system be tailored to the client rather than forcing every business into identical SaaS limits.

Ownership of the asset

Your business data remains yours. Purchased website templates are owned after full payment, and export/handover paths are discussed before launch.

Arabic-first, not translated later

Saudi/Gulf customer language, RTL needs and WhatsApp behaviour are treated as core design inputs for regional deployments.

No per-user ERP pricing

WEBKMT ERP care is based on operating and support workload, helping teams collaborate without a new licence conversation for every seat.

Start small, connect later

A USD 150 template or a focused chat pilot can be the first step toward a store, ERP and automated operations — in the order the business needs.

Honest capability boundaries

We label pilot and roadmap items clearly, keep humans in sensitive decisions, and do not present unvalidated compliance or performance claims as fact.

Proof and confidentiality

WEBKMT focuses on small and medium-sized businesses in Saudi Arabia, the Gulf and the wider Middle East. For legal and confidentiality reasons, this profile does not publish client identities, logos, testimonials or outcome metrics. The most reliable way to evaluate us is to inspect our live website, template demos, free tools and product experiences — then discuss your exact operating needs directly with the team.

Try before you commit

Visit webkmt.com to explore the Template Gallery and free business tools, including the Website Analyzer and ROI Calculator. Then send us the result or describe your bottleneck on WhatsApp.

Let’s build the system your business runs on

Book a short discovery conversation. Tell us where enquiries, sales or operations are getting stuck — we will recommend the smallest WEBKMT system that solves that problem first.
