01 THE SHORT VERSION

What to think about WEBKMT

If you read one page, read this one. WEBKMT is an early-stage, owner-led systems company built on a simple conviction: a small business should be able to buy a working system the way it buys equipment — see the price, know what is included, own what it paid for.

01 We sell working systems, not hours.

Websites, customer response, e-commerce, ERP and automation — delivered as configured, ready-to-run products with published entry prices, not open-ended agency retainers.

02 Your business keeps the asset.

Every system is built on proven open-source cores, white-labelled and configured per client. Templates are owned 100% after payment; ERP data lives on the client's own server. No per-user licence rent, no lock-in by design.

03 Arabic-first, Gulf-aware, honest about compliance.

Based in Türkiye, focused on Saudi Arabia and the wider Middle East, working in Arabic (Saudi/Gulf-friendly) and English. Matters like Saudi e-invoicing are validated per merchant — never blanket-claimed in a brochure.

04 AI with a human hand on the wheel.

Our customer-response AI answers only from information the business has approved, captures enquiries with consent, and hands over to a person. Speed where it is safe, judgement where it matters.

05 Small on purpose — for now.

You deal directly with the owner-led team that scopes and ships your system. Repeatable golden builds, not headcount, are how we scale.

5 sellable systems, one connected route	**2** working languages: Arabic + English	**24/7** online operation, instant first response	**USD 150** lowest published entry price	**100%** template ownership after full payment

02 THE PROBLEM

Small businesses leak money in the gaps between tools

Most SMBs we meet do not have a technology problem. They have a **continuity** problem: attention arrives in one place, enquiries wait in another, and the record of what happened lives nowhere.

- **The unanswered enquiry.** A prospect messages on WhatsApp at 21:40. Nobody replies until morning — if at all. The sale quietly goes to whoever answered first.
- **The spreadsheet business.** Invoices in one file, stock in another, customer history in someone's phone. Every report is archaeology; every absence is a crisis.
- **The per-seat rent.** Mainstream SaaS charges per user, per month, forever — in dollars, in English, on someone else's roadmap. The business rents its own operations and owns nothing.
- **The opaque quote.** "Request a quote" for everything, prices discovered after three meetings. Owners delay decisions because they cannot compare.
- **The language gap.** Tools built for other markets treat Arabic and RTL as an afterthought — in the very markets where customers expect Arabic first.

Our reading of the market

Middle East SMBs do not need more software accounts. They need the **route** connected: be found, respond instantly, sell, keep the record, automate the repetition — installed as one coherent system, at a price published before the first call. That is the gap WEBKMT was built to close.

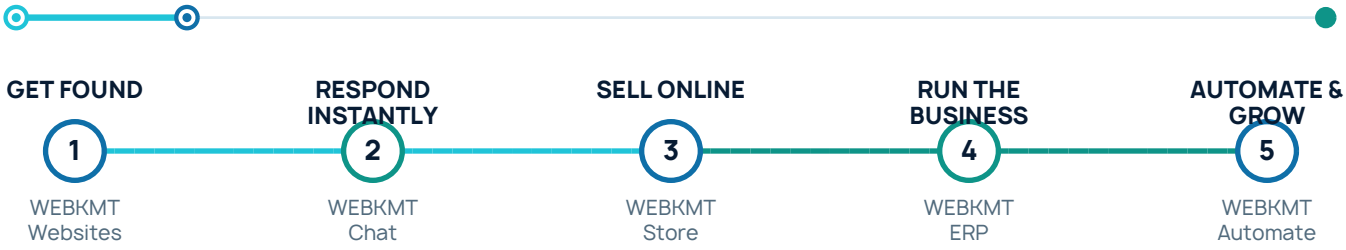

Every leak above has a station that closes it

The leak	The station that closes it
Unanswered enquiries, day and night	**WEBKMT Chat** — instant approved answers and lead capture, 24/7
No presence that converts attention into enquiries	**WEBKMT Websites** — a site built around the enquiry, from USD 150
Selling by chat thread and spreadsheet	**WEBKMT Store** — catalogue, checkout and orders in one system
Records scattered across files and phones	**WEBKMT ERP** — one operating record for the whole business
Repetitive follow-ups done by hand (or not at all)	**WEBKMT Automate** — reminders, follow-ups and reports that run themselves

03 WHAT WEBKMT IS

One connected route, five systems

Think of a business as a route a customer travels. WEBKMT installs the stations on that route — each one useful alone, compounding together.

Installers, not rent-collectors

We configure mature open-source platforms — the same class of foundations large companies run (ERPNext for operations, Bagisto for commerce, a headless CMS line for websites, Google Gemini models behind our own gateways for AI) — into systems branded and tuned for one business at a time. The client buys a configured asset and optional care, not a seat at our table forever.

Productised, not bespoke-by-default

Each system starts from a maintained **golden build**: pre-configured, documented and cloneable. That is how a small team delivers predictably — and how published entry prices are possible at all. Custom work is scoped honestly on top, never smuggled into a package.

Proven foundations, productised by WEBKMT

Foundation	Its role in a WEBKMT system
ERPNext (open source)	Operations core inside WEBKMT ERP — accounting, inventory, sales, HR
Bagisto (open source)	Commerce core inside WEBKMT Store — catalogue, checkout, orders
Headless CMS (open source)	Client-managed content behind WEBKMT Websites and template installs
Google Gemini models	Classification and answer generation for WEBKMT Chat, behind WEBKMT validation gateways
Meta WhatsApp Cloud API	The official WhatsApp channel for client deployments — never unofficial gateways

What we are not

Not a generalist agency selling hours. Not a SaaS reseller marking up someone else's seats. Not a "growth partner" with unverifiable case-study wallpaper. Our proof is inspectable instead: this website, the template gallery, the free tools and guided product walkthroughs.

04 PORTFOLIO

The systems, and how ready each one is

We label maturity plainly. A pilot is called a pilot; work in development is not sold as finished. Full specifications and prices are in the companion **Systems Catalog 2026**.

System	Role on the route	Status	Published entry
WEBKMT Websites	Business websites from ready designs, three clear plans	Available now	USD 150
WEBKMT Chat	WhatsApp + website AI receptionist: instant approved answers, lead capture, handoff	Pilot deployments	USD 300 + 29/mo
WEBKMT Store	Complete e-commerce system, Arabic/English storefront	Scoped implementation	USD 899
WEBKMT ERP	Finance, inventory, sales, people and operations in one record	Scoped implementation	USD 1,400 + care
WEBKMT Automate	Workflow automation between the tools a business already uses	Scoped projects	Official quote
WEBKMT Marketing	Campaigns, content and customer-growth system	In development	Partner enquiries

Why this order matters

The portfolio follows the customer's journey and the client's cash flow. A business can start where it hurts most — usually presence or response — for a few hundred dollars, prove value, then connect the next station. Every station makes the others more valuable: the store feeds the same record the ERP keeps; the receptionist answers from the same approved information the website publishes.

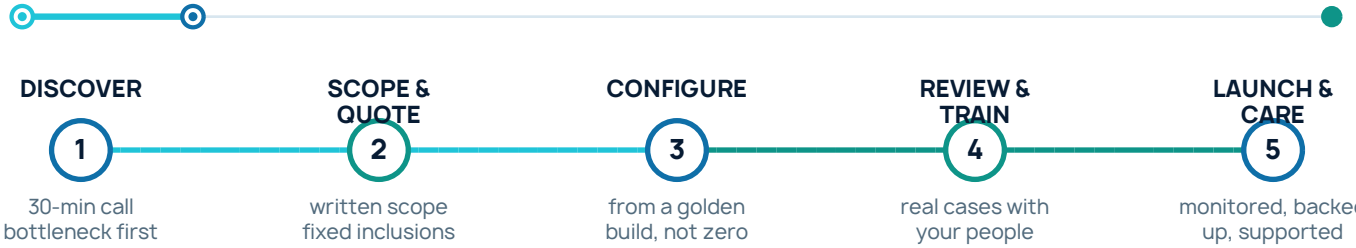

A note on the pilot label

WEBKMT Chat is being hardened the way serious software should be: first on our own business as tenant zero, behind gateways that validate every generated answer against approved prices and facts before anything is sent. Pilot clients join that standard knowingly, with human fallback from day one.

05 HOW WE WORK

Golden builds in, running systems out

Delivery is engineered to be repeatable: the same five moves, whichever station on the route we are installing.

Typical timelines (confirmed in the quote)

- Template files: **within 2 days** of payment
- Customized website files: typically 3–7 working days
- Ultimate website: typically 1–3 weeks
- WEBKMT Chat setup: typically 3–7 working days after materials
- Store initial setup: typically 1–3 weeks after inputs
- ERP implementation: typically 2–6 weeks by scope

What we ask from the client

- Logo and brand files
- Content, product and service information
- Domain / hosting or account access where applicable
- Business registrations for payments and invoicing
- One decision-maker we can reach

The clock pauses while we wait for inputs, payments or registrations — and we say so in the quote, up front.

Care is a product, not an afterthought

Systems drift: content changes, platforms update, questions multiply. Our care programs bundle managed hosting and SSL, scheduled updates with post-update checks, daily backups with restore help, monitoring, break-fix support for what we delivered, and a monthly allowance of small changes — tiered by workload, never by user count.

06 BUSINESS MODEL

Published prices in front, care subscriptions behind

For partners and valuators: how WEBKMT intends to make money, stated without ornament.

Revenue line	How it works	Client sees
Setup & packages	Fixed published entry prices (USD 150 – 1,400); scoped work quoted in writing; hard ceiling — no package above USD 10,000	The price before the first call
Care subscriptions	Monthly care for Chat operations and ERP (USD 29; USD 59/119/229 by workload) and annual website maintenance inside Ultimate	One predictable line item
Expansion	Each installed station creates the context for the next: website → response → store/ERP → automation	Start where it hurts, grow when ready
Custom & scoped work	Fixes, hosting help, web apps and AI/automation projects, owner-scoped after discovery	A written quote, or a clear no

Why the economics can work

- **Open-source cores** mean our cost base is engineering and care — not licence resale margins shared with a platform vendor.
- **Golden builds** convert one client's delivery work into every future client's starting point.
- **Published prices** shorten sales cycles: the conversation starts at fit and scope, not at "what will this cost?".
- **Free tools** (analyzer, calculators, link builder) earn attention and qualify demand at near-zero marginal cost.

What we will not do for revenue

- Invent metrics, logos or testimonials to look bigger than we are.
- Sell a system as finished while it is in pilot or development.
- Lock a client in by withholding their data, files or credentials.
- Quote a price the written scope cannot support.

07 MARKET FOCUS

Saudi Arabia and the Gulf first, the Middle East as home ground

Focus is a feature. We would rather be exactly right for one market than approximately relevant everywhere.

Where we stand

- **Base:** Türkiye — operating online, 24/7.
- **Core market:** Saudi Arabia and the Gulf; serving the wider Middle East.
- **Languages:** Arabic (Saudi/Gulf-friendly) and English across site, systems and AI answers, with RTL-aware interfaces.
- **Buyer:** owners of small and mid-sized companies who feel the enquiry leak and the spreadsheet ceiling personally.

How we handle local rules

Saudi commerce has real requirements — business registration, payment onboarding, and ZATCA e-invoicing among them. Those belong to the merchant and are validated **per business during implementation**. We scope and integrate accordingly; we do not print "fully compliant" on a brochure and hope. Partners evaluating us should read that as a risk posture, not a gap.

The wedge

Arabic-first delivery + published prices + client ownership is a rare combination in this market segment, where the alternatives are global per-seat SaaS in English, or opaque local agency quotes. WEBKMT is built to be the obvious third option for an SMB owner who wants a system, a price, and their name on the asset.

08 PROOF & PRINCIPLES

Don’t take our word for it — inspect the work

Client identities are confidential and stay that way, for legal reasons. So our proof is designed to be examined, not admired.

What you can inspect today

- **webkmt.com** itself — bilingual, productised offers, live assistant
- The **template gallery** with the same three plans on every design
- **Free working tools** — Website Analyzer, ROI Calculator, Color Palette, KMT Link
- **Guided product overviews** on request — what each system does, and honestly what it does not yet do
- This profile’s companion **Systems Catalog** — every published price in one place

Principles we operate by

- **Official quotes govern.** Scope, exclusions and third-party charges in writing before work begins.
- **Approved information only.** AI answers are grounded in what the business approved — and validated before sending.
- **Humans confirm commitments.** Appointments and prices beyond the published list are confirmed by a person.
- **Ownership is real.** Files, data and exports remain the client’s; leaving is always possible.
- **Confidentiality by default.** We market our products, never our clients’ identities.

09 DIRECTION

Where WEBKMT is going next

Sequenced by dependency, not by calendar promises.

01 **Chat: pilot → general availability.**
Complete the receptionist's hardening on our own tenant — answer quality gates, booking and human handoff — then open standard deployments at the published price.

02 **Store: golden image → repeatable Saudi-ready installs.**
Freeze the commerce golden build and the merchant-validation checklist so each new store is a configuration exercise, not a research project.

03 **Marketing: from development to fifth station.**
Bring the campaign/content system to the same productised standard, closing the route from first click to repeat customer.

04 **Care: the quiet compounding layer.**
Grow the subscription base that keeps every installed system updated, backed up and answered for — the revenue that funds the roadmap.

05 **Partnerships, carefully.**
Referral and delivery partnerships with people who already serve Gulf SMBs are welcome conversations — where incentives stay aligned with the end client's outcome.

What a partner or investor should expect from us

Small numbers, honestly labelled, growing from productised delivery rather than headcount. We publish our prices, label our pilots, keep our clients' names out of our marketing — and intend to still be doing exactly that when the numbers are bigger.

10 COMPANY SNAPSHOT

Facts & how to reach us

Everything on this page is verifiable today.

Company	WEBKMT — ready-to-run business systems (websites, WhatsApp AI, e-commerce, ERP, automation)
Base	Türkiye · operating online 24/7
Markets	Saudi Arabia and the Gulf first; wider Middle East served
Languages	Arabic (Saudi/Gulf-friendly) and English
Team model	Owner-led specialist team; clients deal directly with the people who scope and ship
Pricing posture	Published entry prices; written official quotes; no package above USD 10,000
Payments	IBAN · Western Union · Crypto — details shared by a human after the official quote
Email	info@webkmt.com
WhatsApp	+90 501 361 7795 (general WEBKMT contact)
